

AGS Res3DInv release notes

New features

Res3DInv 3.20 brings updates to the 3D viewer and a new licensing system.

New visualisation tools

The 3D viewer has been updated with new movement controls, keyboard shortcuts, and speed optimisation to give the user a faster workflow. It is also now possible to load/save 3D viewer projects. This makes it easy to save 3D views and reload them later.

New licensing system

Easily administer your licence and assign it to others within your organisation with the new Seequent ID licensing system.
